1- SUBUNIT: THE VIRTON OF THIS VIRUS IS A NUCLEOCAPSID COVERED BY LIPOPROTEIN ENVELOPE. THE ENVELOPE CONSISTS OF TWO PROTEINS:

PROTEIN M AND GLYCOPROTEIN E. THE NUCLEOCAPSID IS A COMPLEX OF PROTEIN C AND MANA (BY SIMILARITY).

RESULT 6 US-09-263-933-4

Sequence 4, Application US/09263933 Patent No. 6280940

```
APPLICANT: Jackson, Roberta L.

APPLICANT: Jackson, Roberta L.

APPLICANT: Patick, Amy K.

APPLICANT: Patick, Amy K.

TITLE OF INVENTION: REPORTER GENE SYSTEM FOR USE IN CELL-BASED ASSESSMENT
TITLE OF INVENTION: OF INHIBITORS OF THE HEPATITIS C VIRUS PROTEASE
FILE REFERENCE: 0125-0005A
CURRENT APPLICATION NUMBER: US/09/919,901
CURRENT FILING DATE: 2001-08-02
PRIOR APPLICATION NUMBER: 09/63,933
PRIOR FILING DATE: 1999-02-08
PRIOR FILING DATE: 1999-02-08
PRIOR FILING DATE: 1998-08-05
NUMBER OF SEQ ID NOS: 33
SOFTWARE: Patentin Ver. 2.0
SEQ ID NO 4
LENGTH: 1692
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ; LENGTH: 1692

Sequence 18, Application US/09263933

Patent No. 6280940

GENERAL INFORMATION:

APPLICANT: Potts, Karen E.

APPLICANT: Potts, Karen E.

APPLICANT: Patick, Amy K.

TITLE OF INVENTION: REPORTER GENE SYSTEM FOR USE IN CELL-BASED ASSESSMENT TITLE OF INVENTION: OF INHEITORS OF THE HEBATITIS C VIRUS PROTEASE

FILE REFERENCE: 0125-0005A

CURRENT APPLICATION NUMBER: US/09/263,933

CURRENT APPLICATION NUMBER: 09/129,611

EARLIER APPLICATION NUMBER: 09/129,611

EARLIER APPLICATION NUMBER: 09/129,611

XX HCP The invention relates to an isolated polypeptide consisting of a full-length HCV (hepatitis C virus) non-structural (NS)2/3 protease (referred to also as NS2/3 (810-1206)), or its truncation, having as its N-terminal residue amino acid 810 to 906, or rhaving a minimal amino acid sequence from residues 904 to 1206 of hepatitis C virus (HCV) 1b-40 full-length NS2/3 protease. Also included are (1) a composition (C) comprising an isolated HCV NS2/3 protease selected from full length NS2/3 protease, or its truncation or a mutated sequence, where the protease is in a solution comprising a sufficient concentration of lauryldiethylamine oxide (LDAO) to prevent auto-cleavage of the protease; (2) a NS2/3 inhibitory peptide

The invention relates to an isolated polypeptide consisting of a full-
CC length HCV (hepatitis C virus) non-structural (NS)2/3 protease (referred
CC to also as NS2/3 (810-1206)), or its truncation, having as its N-terminal
CC residue amino acid 810 to 906, or having a minimal amino acid sequence
CC from residues 904 to 1206 of hepatitis C virus (HCV) 1b-40 full-length
CC (NS2/3) protease. Also included are (1) a composition (c) comprising a sufficient concentration of lauryldathylamine oxide (LDAO)
CC comprising a sufficient concentration of lauryldathylamine oxide (LDAO)
CC appearing as ABG32198; (3) protease; (2) a NS2/3 inhibitory peptide
CC chaotropic agent, refolding the protease in the presence of a
CC reducing agent, and LDAO in the presence of reduced concentration of the
CC chaotropic agent or a polar additive; (4) producing (M1) an active NS2/3
CC protease; involving includating the isolated protease by contacting it with a
CC reducing agent or a polar additive; (4) producing (M2) an active NS2/3
CC protease; (5) measuring (M3) the auto-cleavage activity of NS2/3
CC protease; (5) measuring (M3) the auto-cleavage activity of NS2/3
CC protease; (5) measuring (M3) the auto-cleavage activity of NS2/3
CC protease; (6) screening a potential inhibitor of auto-cleavage activity of an activation of a potential inhibitor of auto-cleavage activity of an activation of a potential inhibitor of auto-cleavage activity of an active NS2/3 protease, cleavage products or their fragments. The protease in a consense of an active NS2/3 protease, cleavage products or their fragments of the presence of an active NS2/3 protease, cleavage products or their fragments of the presence of or absence of the potential inhibitor of auto-cleavage activity of an activity of an activity of an activity of an activity of an activity of an activity of an active NS2/3 protease in the presence of or a cleavage of the potential inhibitor of auto-cleavage activity of an activity of an activity of an activity of an activity of an activity of a

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ABG32181 standard;
The invention relates to an isolated polypeptide consisting of a full-length HCV (hepatitis C virus) non-structural (NS)2/3 protease (referred to also as NS2/3 (810-1206)), or its truncation, having as its N-terminal residue amino acid 810 to 906, or having a minimal amino acid sequence from residues 904 to 1206 of hepatitis C virus (HCV) 1b-40 full-length NS2/3 protease. Also included are (1) a composition (C) comprising an isolated HCV NS2/3 protease selected from full length NS2/3 protease, or its truncation or a mutated sequence, where the protease is in a solution comprising a sufficient concentration of lauryldiethylamine oxide (LDAO) to prevent auto-cleavage of the protease; (2) a NS2/3 inhibitory peptide
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   HCV protease NS2/3 (810-1206).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 05-NOV-2002
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ABG32181;
                                                                                                                                                                                                                                                                                                                                                                                          Novel polypeptide for screening inhibitors of non-structural proteases useful as therapeutic agents against hepatitis C virus, comprises full length non-structural protease, or its truncation.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            15-DEC-2000; 2000US-0256031P

Partial HCV

non-structural polyprotein.

proteinase; hepatitis C virus; identification; cleavage.

screening; inhibitor; proteolytic,

AAR82694;

AAR82694 standard;

protein; 3010 AA.

```
CC appearing as ABG32198; (3) producing (M1) a refolded, inactive HCV NS2/3 CC protease, involving isolating the protease in the presence of a cc chaotropic agent, refolding the isolated protease by contacting it with a CC reducing agent, and LDAO in the presence of reduced concentration of the CC chaotropic agent or a polar additive; (4) producing (M2) an active NS2/3 cc containing an activation detergent to induce auto-cleavage of the NS2/3 cc protease; (5) measuring (M3) the auto-cleavage activity of NS2/3 cc protease; involving incubating the active NS2/3 protease and produce cc cleavage products or their fragments, and measuring the presence or sensitive not their fragments, and measuring the produce of the NS2/3 protease, cleavage products or their fragments, and measuring the presence of cc active NS2/3 protease, involving carrying out M3 in the presence of, or active NS2/3 protease, cleavage products or their fragments of the presence of, or active NS2/3 protease, on the protease, cleavage products or their fragments. The protease is cuseful for detailed biochemical characterisation of the enzymes and in the development of in vitro assays for screening novel inhibitors of the enzymes which causes chronic liver disease, cirrhosis and end-stage created represents the NS2/3 (B10-1206) protein, which has a C-terminal errent-vivilin tag.

겆

An HCV V proteinase active and can be used to substance - which has activity as screen for proteinase inhibitors. an

Disclosure; Page 39-48; 52pp; Japanese.

The present sequence is a partial Hepatitis C Virus (HCV) polyprotein from the non-structral region. Partial proteinase sequences (AAR82692-93) are contained within this sequence. The proteinases can be used as anti-HCV agents. They can also be used to screen cpds. for their ability to inhibit their proteolytic activity. In this way proteinase inhibitors can be identified. (Updated on 16-OCT-2003 to standardise OS field)

> DT This protein from HCV (hepatitis C virus) (encoded by AAQ80498) is cleaved between amino acids 2419 and 2420, by a new serine protease, contg. the sequence of AAR6821. The proteinase is purified as a fused product with the dihydrofolate reductase protein by using a methotrexate column. It can be used for the development of an inhibitor for HCV proteinase. The invention describes a self-replicating hepatitis C virus (HCV) CC polynucleotide molecule comprising a 5'-non translated region (NTR), CC where guanine at position 1 is substituted for adenine, a HCV polyprotein region coding for a HCV polyprotein; and a 3'-NTR region. The self-creplicating Hepatitis C virus (HCV) RNA molecule is useful for evaluating contential inhibitors of HCV replication. The HCV RNA molecule is also useful for efficiently establishing cell culture replication. The self-creplicating polynucleotide molecule contains a 5'-NTR, where G at position 1 is substituted for A, and therefore provides an alternative to conjunction with mutations in the HCV non-structural region, such as the CC existing systems comprising a self-replicating HCV RNA molecule that, in CC conjunction with mutations in the HCV non-structural region, such as the CC (12042) C/R mutations, transduces and/or replicates with greater CC efficiency. This amino acid sequence represents a mutant of the hepatitis CC virus replicate NS3/4, helicase NS3 and RNA-dependent RNA polymerase NS2/3, protease complex NS3/4, helicase NS3 and RNA-dependent RNA polymerase NS5B. Note: This sequence does not appear in the specification but has been created from the wild type sequence shown in ABG30580 using information given in two claims of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Query Match

The invention describes a self-replicating hepatitis C virus (HCV) polynucleotide molecule comprising a 5'-non translated region (NTR), where guanine at position 1 is substituted for adenine, a HCV polyprotein region coding for a HCV polyprotein, and a 3'-NTR region. The self-control of the first polyprotein, and a 3'-NTR region. The self-control inhibitors of HCV replication. The HCV RNA molecule is also potential inhibitors of HCV replication. The HCV RNA molecule is also consisted for efficiently establishing cell culture replication. The self-control for efficiently establishing cell culture replication. The self-consisting polynucleotide molecule contains a 5'-NTR, where G at conjunction is substituted for A, and therefore provides an alternative to conjunction with mutations in the HCV non-structural region, such as the conjunction with mutations in the HCV non-structural region, such as the conjunction with molecule sand/or replicates with greater cefficiency. This amino acid sequence represents a mutant of the hepatitis complex NS3/4, helicase NS3 and RNA-dependent RNA polymerase NS5B. Note: C virus replicates NS3 and RNA-dependent RNA polymerase NS5B. Note: C this sequence does not appear in the specification but has been created the wild type sequence shown in ABG30580 using information given in the claims of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Hepatitis C virus. Synthetic.
                                                                                                                                                                                                                                                                                                                                                                                                                    New self-replicating RNA molecules from Hepatitis C virus (HCV), which possess enhanced transduction or replication efficiency, useful for evaluating potential inhibitors of HCV replication.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Misc-difference
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Self-replicating; hepatitis C virus; HCV; HCV replication inhibitor; cell culture replication; NS2/3; NS3/4; NS3; NS5B; mutant; mutein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Hepatitis C virus NS2/3, NS3/4, NS3 and NS5B mutant
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               21-OCT-2002
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ABG30591;

ĀĀ,

New self-replicating RNA molecules from Hepatitis C virus (HCV), possess enhanced transduction or replication efficiency, useful evaluating potential inhibitors of HCV replication.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           멍
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            В
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      В
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          S
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   XXX8888888888888888888888888
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The invention describes a self-replicating hepatitis C virus (HCV) CC polymucleotide molecule comprising a 5'-non translated region (NTR), CC where guanine at position 1 is substituted for adenine, a HCV polyprotein region coding for a HCV polyprotein; and a 3'-NTR region. The self-creplicating Hepatitis C virus (HCV) RNA molecule is useful for evaluating potential inhibitors of HCV replication. The HCV RNA molecule is also useful for efficiently establishing cell culture replication. The self-creplication is substituted for A, and therefore provides an alternative to position 1 is substituted for A, and therefore provides an alternative to conjunction with mutations in the HCV non-structural region, such as the G(2042) C/R mutations, transduces and/or replicates with greater efficiency. This amino acid sequence represents a mutant of the hepatitis C virus replican APGK12 and contains the viral protease NS2/3, protease complex NS3/4, helicase NS3 and RNA-dependent NNA polymerase NS5B. Note: This sequence shown in ABG30580 using information given in two claims of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Query Match
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The invention describes a self-replicating hepatitis C virus (HCV) polynucleotide molecule comprising a 5'-non translated region (NTR), where guanine at position 1 is substituted for adenine, a HCV polyprotein region coding for a HCV polyprotein; and a 3'-NTR region. The self-replicating Hepatitis C virus (HCV) RNA molecule is useful for evaluating potential inhibitors of HCV replication. The HCV RNA molecule is also useful for efficiently establishing cell culture replication. The self-replicating polynucleotide molecule contains a 5'-NTR, where G at position 1 is substituted for A, and therefore provides an alternative to existing systems comprising a self-replicating HCV RNA molecule that, in conjunction with mutations in the HCV non-structural region, such as the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        G(2042)C/R mutations, transduces and/or replicates with greater efficiency. This amino acid sequence is encoded by the hepatitis C virus replicon APGK12 and contains the viral protease NS2/3, protease complex NS3/4, helicase NS3 and RNA-dependent RNA polymerase NS5B
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Sequence 2201 AA;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Disclosure; Page 49-58; 140pp; English.

                                                           뮹
                                                                                                                                                                                                               The invention describes a self-replicating hepatitis C virus (HCV)

CC polynucleotide molecule comprising a 5'-non translated region (NTR),

CC where guanine at position 1 is substituted for adenine, a HCV polyprotein

CC region coding for a HCV polyprotein, and a 3'-NUR region. The self-

CC replicating Hepatitis C virus (HCV) RNA molecule is useful for evaluating

CC otential inhibitors of HCV replication. The HCV RNA molecule is also

CC useful for efficiently establishing cell culture replication. The self-

CC replicating polynucleotide molecule contains a 5'-NUR, where G at

CC position 1 is substituted for A, and therefore provides an alternative to

CC existing systems comprising a self-replicating HCV RNA molecule that, in

CC conjunction with mutations in the HCV non-structural region, such as the

CC (2042)C/R mutations, transduces and/or replicates with greater

CC efficiency. This amino acid sequence represents a mutant of the hepatitis

CC virus replicon APGK12 and contains the viral protease NSC3, protease

CC complex NS3/4, helicase NS3 and RNA-dependent RNA polymerase NS5B. Note:

CC complex NS3/4, helicase NS3 and RNA-dependent RNA polymerase NS5B. Note:

CC this sequence does not appear in the specification but has been created

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        198
```

The invention describes a self-replicating hepatitis C virus (HCV) polynucleotide molecule comprising a 5'-non translated region (NTR), where guanine at position 1 is substituted for adenine, a HCV polyprotein region coding for a HCV polyprotein; and a 3'-NTR region. The self-replicating Hepatitis C virus (HCV) RNA molecule is useful for evaluating potential inhibitors of HCV replication. The HCV RNA molecule is also useful for efficiently establishing cell culture replication. The self-replication polynucleotide molecule contains a 5'-NTR, where G at position 1 is substituted for A, and therefore provides an alternative to existing systems comprising a self-replicating HCV RNA molecule that, in

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    conjunction with mutations in the HCV non-structural region, such as the G(2042)C/R mutations, transduces and/or replicates with greater efficiency. This amino acid sequence is encoded by the hepatitis C virus replicon APGK12 and contains the viral protease NS2/3, protease complex NS3/4, helicase NS3 and RNA-dependent RNA polymerase NS5B. Note: this sequence has been created from replicon APGK12 shown in ABG30581
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Sequence 2201 AA;

CC The invention describes a self-replicating hepatitis C virus (HCV) CC polynucleotide molecule comprising a 5'-non translated region (NTR), CC where guanine at position 1 is substituted for adenine, a HCV polyprotein coding for a HCV polyprotein; and a 3'-NTR region. The self-cc replicating Hepatitis C virus (HCV) RNA molecule is useful for evaluating CC useful for efficiently establishing cell culture replication. The self-cplicating polynucleotide molecule contains a 5'-NTR, where G at CC position 1 is substituted for A, and therefore provides an alternative to conjunction with mutations in the HCV non-structural region, such as the CC conjunction with mutations in the HCV non-structural region, such as the CC (2042)C/R mutations, transduces and/or replicates with greater cC efficiency. This amino acid sequence is encoded by the hepatitis C virus (CC NS3/4, helicase NS3 and RNA-dependent RNA polymerase NS5B Sequence 2201 AA;

RESULT 15
ABG30587

ABG30587 standard; protein; 2201 AA.

XX

AC ABG30587;

XX

DT 21-CCT-2002 (first entry)

XX

DE Hepatitis C virus NS2/3, NS3/4, NS3 and NS5B #7.

XX

XX

KW Self-replicating; hepatitis C virus; HCV; HCV replication inhibitor;

XX

XX

Cell culture replication; NS2/3; NS3/4; NS3; NS5B.

XX

CS Hepatitis C virus.
